for a better quote☐ thank☐ you the  
costaricareisen.de ☐ team**

Corcovado National Park protects major habitats including a montane forest, which covers more than half the park; a cloud forest, located in the highest region, richly populated by oaks and tree ferns; swamp forests, flooded practically year-round; a Yolillo forest, predominated by palms; a mangrove swamp, located on the estuaries of the Llorona, Corcovado and Sirena Rivers; and a freshwater herbaceous swamp.

The park is home to some 500 species of trees-equivalent to a quarter of all the tree species in Costa Rica. Some of the larger trees include the purple heart, guanacaste, ceiba, shoe maker tree, cow tree, espavel and Royal mahogany wood.

Corcovado Location: On the pacific coast 335 km. (208 m.) from San Jose via Inter-American Hwy; Puntarenas, southwestern side of the Osa Peninsula

Corcovado Area: 2,400 Maritime Ha. (5,928 acres); 54,039 Terrestrial Ha. (133,476 acres) – 1/3 of the Peninsula de Osa

Corcovado Services: Camping facilities at Sirena, park headquarters

Hiking: On marked and unmarked trails

Corcovado Annual Rainfall: 6,000 mm (195 inches)

Hours: 7 a.m. to 3 p.m. daily

Corcovado National Park contains approximately 140 species of mammals, 367 birds, 117 amphibians and reptiles, 40 types of freshwater fish, and it is estimated that there are some 6,000 types of insects. It is common to see large herds of white-lipped peccary, as well as howler, spider white faced, and squirrel monkeys. The park is sanctuary to the largest population of scarlet macaws in the country, many of which are easily accessible from the Sirena station or along the beach. Other species of birds found here are the king vulture, white hawk, short-billed pigeon, orange-chinned parakeet and bronze-tailed sickle bill.
